Wood-stick picture frame

KALONI'S WOOD PROJECTS | Ages 6+ with a grown-up

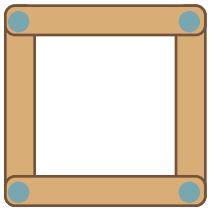

You'll need: 8 regular wooden craft sticks, water-based wood glue, scrap paper, a small picture, tape.

Work with a grown-up. Choose smooth sticks without splinters. No cutting or power tools needed. Protect your table and follow the glue label.

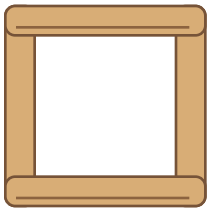

1. Use 4 sticks to arrange a square. Overlap the ends at the corners. Check that your picture fits the opening.

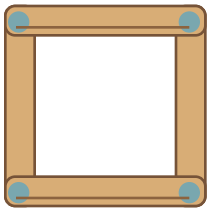

2. Put a small dot of glue at each corner where the sticks overlap. Reassemble the square.

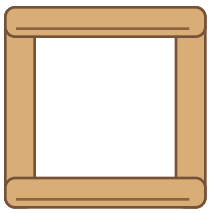

3. Lay the other 4 sticks on top of the first layer, matching each side. Check the square before gluing.

4. Lift one top stick at a time. Add a thin line of glue underneath and put it back. Repeat all 4 sides.

5. Keep the frame flat until the glue is fully cured, following the glue label.

6. Turn it over. Tape your picture to the back so it shows through the opening. Display it flat or lean it safely.
